3.1 **Corporate Logotype**

Primary vertical version

Our new logotype (or logo) is a modern representation of our company. It is designed to clearly and proudly reflect our brand promise—advocates for innovation and the technologies that improve our world. It is intended as a graphic statement about who we are and what we stand for.

The logotype featured on this page is the primary version. It is a custom and proprietary design. Though it is based on typographic elements from an existing font named Karbon, each letter in the logotype has been redrawn to ensure a consistency of character and visual rhythm at a variety of scales and in diverse applications. Do not attempt to reset or copy the logotype in any way.

The primary version is vertically stacked with two shades of blue: Brand Blue for “Consumer Technology” and “Medium Blue” for Association. This subtle color distinction brings an energetic lightness to the presentation of our brand. It is also how we create a visual link to the color palette used in the CES logo. The stacked configuration is designed to graphically complement the CES event logo and also to work in a myriad of partnership branding scenarios.

The primary version of the logotype should be used whenever possible. On the following pages, we present alternate versions permitted for use in specific situations. For detailed information on the colors used in our logo, refer to page 3.20. For more information on the Karbon font and its application as an identity element, refer to page 3.17.

3.2 **Corporate Logotype**

Alternate vertical versions and background application

There are three alternate versions of our logotype: a reversed or white version, a grayscale version, and a one-color version. Each alternative version has advantages and disadvantages. Choose the appropriate alternate logo by focusing on the version that provides the most legibility and visual impact in its given application.

The alternate white version of the logo is designed with a transparency effect to simulate the two blues used in the primary logo. The word “Association” has been set to 60 percent white. Do not alter this percentage.

The white logo version works best when set against our Brand Blue. This is the recommended use case as it ties the brand back to a signature color system. The white version may also be used with any background colors that is dark enough to provide sufficient contrast. The white version often works well when an image background is used, as long as that area of the image is quiet and free of competing clutter or visual noise.

The other two alternative versions—grayscale and one-color—should be used sparingly. These are often the best options when locking up with the CES Event Logo. The grayscale version, a combination of black and 60 percent black, has been created to suit any application that is limited to black and white production. The one-color version is appropriate for applications where multiple colors are not available or transparency is not possible.

3.3 **Corporate Logotype**
Secondary horizontal version

For those instances and applications where vertical space is limited, we have created a horizontal version of our logo. This secondary version may be used in certain instances illustrated in later pages of this section.

*Secondary horizontal logotype*

CMYK version shown in Brand Blue and Medium Blue

**Consumer Technology Association™**
3.4 **Corporate Logotype**  
Alternate horizontal versions and background application

The horizontal version of our corporate logo has been built to include the same alternates that are applied to the vertical version. The preferred version of this logo is white on a Brand Blue background. After that, all other applications should consider legibility and impact when choosing alternate logo versions.

3.5 Corporate Logotype
Clear space and minimum size

Based on twice (2x) the cap height of the initial letter “C” in our logotype, the clear space maintains adequate staging and visibility of our primary vertical and secondary horizontal logo. The preferred clear space offers a generous portion of white space around our logo. Whenever possible, this area must remain clear of other elements and page borders. Imagery and copy should not intrude beyond this border. In some instances such as third-party advertising or event promotional scenarios where we do not have explicit control over the presentation of content, the required clear space, equal to (1x) the height of the letter C, is permissible. But these instances must be kept to a minimum.

Each logo has a minimum size defined for scale and visibility based on the vertical height of the logotype. Any usage of either logo smaller than the prescribed pixel size may impair legibility and is not recommended.
3.6 **Corporate Logotype**
Secondary (Producer of) version

In certain instances and applications, our corporate logo may require a direct lock-up to the CES Event Logo. The words “producer of” can be used to endorse the relationship.

*See Section 3.12 and 3.13 for primary CES and Consumer Technology Association lock-ups.*

**Minimum Height**
3.9 Event Logo
Primary version

Our CES event logo has been designed to share the same bright colors as those used in our corporate logotype. It also uses Karbon for the CES Name. No other colors or typefaces should be used for the CES event logo. The logo is presented here in its preferred application: full color on a white background.

Whenever possible, the CES logo should be placed on a white background as this will ensure the brightness of the colors and the energy of its design. It may not be placed on CTA Brand Blue as this will cause parts of the logo to disappear.

Primary logo
CMYK version shown
For color specifications refer to 3.20
3.10 Event Logo
Alternate version and background application

Due to the relationship of the letters to the holding shape background, as well as the integration of the sails within the CES logo, we have only created one alternate version. A grayscale logo may be used whenever printing limitations dictate. The background application of the CES logo follows the same rules as the corporate logo: always seek to provide adequate contrast and legibility. This means that mostly dark colors will be the best alternative to the preferred white background as suggested above.

Full-color logo
Image background
3.11 Event Logo

Clear space and minimum size

Similar to the corporate logotype, the CES event logo has a clear space area that is based on the cap height of its initial letter. However, only one “C” is needed. The clear space maintains adequate staging and visibility of our CES logo, offering a generous portion of white space, and whenever possible, this area must remain clear of other elements and page borders. Imagery and copy should not intrude beyond this border. In some instances such as third-party advertising or event promotional scenarios where we do not have explicit control over the presentation of content, the required clear space, equal to one half (.5x) the height of the letter C, is permissible. But these instances must be kept to a minimum.

The CES event logo has a minimum size defined for scale and visibility based on the vertical height of the sails. Any use of the logo smaller than the prescribed pixel size may impair legibility and is not recommended.
3.12 Corporate and Event Logos
Primary relationship lock-up

For those instances and touchpoints where both the corporate and event brand logos must be shown together, presenting an equal and integrated relationship between the association and the event, we have created the following relationship lock-ups. These logos illustrate the best version of graphic partnership between the two logos, and should never be altered. Built in proportion to their shared height, the two logos are separated by a gray “pipe” in order to guarantee clarity and organizational understanding.

Secondary (Produced by) versions
CTA vertical and horizontal

In certain instances and applications, it is necessary to present a more formal relationship between the CES event logo and our corporate logo. These secondary “produced by” logos offer us the flexibility to clearly illustrate the production relationship between the two entities. In both versions, vertical and horizontal, the size of our corporate logo is the same. The proportions and alignment of the elements used within these logos should not be altered in any way.

In certain instances and applications, it is necessary to present a more formal relationship between the CES event logo and our corporate logo. These secondary “produced by” logos offer us the flexibility to clearly illustrate the production relationship between the two entities. In both versions, vertical and horizontal, the size of our corporate logo is the same. The proportions and alignment of the elements used within these logos should not be altered in any way.
3.17 **Typographic Overview**  
**Primary and secondary fonts**

Our corporate logo and CES event logo, as well as our basic visual identity system, is anchored by the font known as Karbon. Karbon is an open, geometric sans serif with a contemporary tech-savvy finish. It is an exploration of Paul Renner’s Futura, and so represents an intelligent evolution from our previous CES visual identity system. But where Futura left off with a slightly cold and rigid personality, Karbon brings a fresh perspective with irregular curves and open, humanist figures. As a consequence, it is both warm and cold, analytical as well as creative. Contemporary with a subtle nod to history and the birth of modernity.

As an element within our identity system, Karbon acts as the dominant signifier for our brand. Used for both headlines and body copy, over time, we will become recognized through the repeated use of its various typefaces.

*Like Myriad for Apple or Corporate Condensed for Mercedes-Benz, careful and considerate use of Karbon will drive brand awareness and equity in our visual identity.*

For the breadth and depth of our touchpoints and the applications found within the CES event, we have anchored Karbon with two complementary typefaces: Helvetica Neue for those few instances where a Condensed Sans Serif may be required, and Archer as an alternative font for dense body copy where a serif may ease reading and overall legibility.

The following pages will illustrate a few examples of our typographic palette in application. However, they do not represent the breadth and depth of our visual identity system.

3.21 Color Palette Overview

Specifications

Our color palette is a reflection of balance: crisp cool blues and greens are tempered with bright yellows, oranges and red. Anchored by our Brand Blue, our palette creates complementary vibration as cool meets bright, and the analytical balances the emotional. Our Brand Blue is our primary color as it is used for our primary background whenever white is not available. The neighboring greens add a sense of depth and calm. Whereas the brighter yellows and oranges into red create stark contrast and focused vibrancy. Taken as a collective whole, our palette creates a sense of tension—an engaging relationship between energy and warmth, friendly and exciting, modern and familiar. Colors may be tinted as necessary to aid in information design and digital applications. When used properly, color can be a powerful expression of our brand’s promise.

© 2016 Consumer Technology Association
3.22 Color Palette Organization
Logos and backgrounds

This page provides an at-a-glance understanding for the roles and hierarchy of our color palette, especially as it pertains to background control for our various corporate logotypes and event logos. White and Brand Blue anchor our system and should be used in greater proportion to aid visual recognition of our brand. Secondary blues and greens offer balance, and should be used in more sparing application. The bright colors should be retained for specific highlights and pops of color to bring focus and clarity to our messages and brand applications. Black serves to anchor the opposite end of our color spectrum and should be used to control background application as well as most typographic treatments.
BASIC IDENTITY ELEMENTS

3.23 CES® Trademarks

The Consumer Technology Association™ (CTA) is the owner of the CES name, trademarks and logos (collectively, the “CES Marks”). The CES Marks are valuable assets that CTA needs to protect.

Current CES exhibitors and press covering the show may use the mark under the terms outlined below. The CES logo and name can be used in your communications about the show, however, you must properly use and credit the CES Marks in accordance with our guidelines.

Guidelines for Third Party Usage of CES Trademarks

Terms of use: Thank you for being a CES exhibitor, media. CTA grants you non-transferable, limited, non-exclusive, royalty-free, revocable permission to use the CES Marks solely in connection with the current CES show, at which you are exhibiting or covering via a recognized press outlet. You agree to use the CES Marks in accordance with these guidelines.

Trademark Symbols: You must use the ® symbol with any written appearance of the “CES” mark on advertisements, promotional materials and webpages. Include acknowledgment of CTA’s ownership of the CES Marks in the credit notice section of your document or advertisement. Example – “CES® is a registered trademark of the Consumer Technology Association.”

Proper Brand Use: Since CES is recognized as a global event, CTA no longer uses “International” in the event name or logo. The official name of the global technology event is “CES®. Please do not use “Consumer Electronics Show” to refer to CES. If you choose to reference the year when referring to CES, it should come after the event. Example – “CES 2017.” For information about proper use of CES logos and logotypes, please review the CES Brand Book.

Permissible Use: You may generally use CES Marks to refer to your participation (official exhibitors) or media coverage in CES. For instance, a current exhibitor can promote in advertisements that they are participating officially in CES.

Relationship of Products or Services: On advertising and other collateral, you may not imply that your product, service or event is produced or endorsed by CES unless you in engage in a specific contract with CTA that allows you to do so.

Prohibited Use:
• Do not modify or alter the CES Marks.
• You may not use the CES Marks in a way that confuses CES with another brand, or in a way that indicates an endorsement, sponsorship or association with or by CES.
• Do not use CES Marks or potentially confusing variations in your Internet domain name or social media accounts.
• You must be a current CES exhibitor contracted with CTA for event space or services.

Quality Control: If CTA determines that you are not using the CES Marks in compliance with these guidelines, CTA may notify you and provide you an opportunity to fix any non-conformity. CTA reserves the right to disallow any exhibitor from using the CES Marks.
